Machine Learning for Biostatistics (MLB) **Semester 2, 2022**

Contact details

Armando Teixeira-Pinto

School of Public Health
University of Sydney

(02) 9351 5424

armando.teixeira-pinto@sydney.edu.au

Deputy Coordinator (In case of illness or extended absence of the unit coordinator)

Dr Tim Schlub
School of Public Health, University of Sydney.
tim.schlub@sydney.edu.au

For **enquiries about receipt of assignments**

Biostatistics Administrative Officer
School of Public Health, University of Sydney
(02) 9351 5994
sph.bsta@sydney.edu.au

If you have any **general BCA queries**, please contact: Karolina Kulczynska-Le Breton or Emily Higginson at the BCA Coordinating Office on 02 9562 5076/54 or email bca@sydney.edu.au

Background

Recent years have brought a rapid growth in the amount and complexity of data in biostatistical applications. Among others, data collected in imaging, genomic, health registries, call for new statistical techniques in both predictive and descriptive learning. Statistical machine learning is a collection of algorithms and techniques for classification and prediction that complement classical statistical tools in the analysis of these data.

Context within the program

This unit covers other modern approaches to statistical modelling focusing on prediction. Students should already be familiar with principles of statistical inference, linear and logistic regression.

Prerequisites

Regression Modelling for Biostatistics 1 (RM1) or
Biostatistics: Statistical Modelling (PUBH5217)

Unit summary

This unit will introduce students to modern machine learning methods, particularly useful for large and complex data. Topics include, classification trees, random forests, model selection, lasso, bootstrapping, cross-validation, generalised additive modelling, and regression splines. Some mathematical details will be covered but the primary emphasis of the course will be on the intuition, implementation, and application of these methods. The statistical software R package will be used throughout the unit.

Workload requirements

The expected workload for this unit is 10-12 hours per week on average, consisting of guided readings, discussion posts, independent study, and completion of assessment tasks.

Learning Outcomes

At the completion of this unit you should be able to:

1. Recognise situations where machine learning methods can offer advantages over traditional statistical modelling approaches to data analyses in health applications
2. Recognise and explain the differences between the goals of description and prediction
3. Determine and implement appropriate machine learning approaches for description and prediction in real-world health applications
4. Measure and explain the uncertainty of the results of analyses using machine learning approaches
5. Interpret the results of analyses using machine learning in light of the assumptions required, the quality of input data, and the sensitivity to the specific technique implemented
6. Critically appraise published papers concerning machine learning applications for classification or prediction in health
7. Effectively communicate results of analyses in language suitable for a clinical or epidemiological journal

Unit content

The unit consists of 8 modules, summarised in more detail below. Each module is designed to take between 1 and 3 weeks to complete (see timetable below) and includes the following:

- An introductory video
- Slides used in the video
- Selected readings from the textbook.
- Exercises - there will be several exercises at the end of each module that students should try to complete.
- Optional tutorial – for every module the Instructor will run an online session to discuss the solutions of the proposed exercises and other questions posed by the students. The schedule for these sessions will be agreed with the students.

The last module is an elective topic. The student will be encouraged to research one additional topic to his/her choice.

All materials are accessed from the eLearning unit site. Assignments and supplementary material such as datasets will be available within each Assignment item. Please note that we are not able to post copies of copyright material (journal articles and book extracts)—for these you will have to rely on your home university's library.

Recommended approaches to study

Students should work through each module systematically, following the module notes and any readings referred to, and working through the accompanying exercises. *You will learn a lot more efficiently if you tackle the exercises systematically as you work through the notes.* You should also work through all the computational examples in the notes for yourself on your own computer.

Outline solutions to the exercises in each module (except those to be submitted for assessment, as described below) will be posted online at the midway point of the allocated time for the module. This is intended to encourage you to attack the exercises independently (or via the eLearning site), and yet not make you wait too long to see the sketch solutions.

Make the most of this unit by engaging with the instructor and fellow students on the Discussion Board and in online sessions. These are safe spaces to discuss the course material and related ideas and students are encouraged to make the most of them by engaging in respectful discussion.

Questions about Assignments should be directed to the coordinator in the first instance to avoid any Academic Honesty issues of collusion.

Method of communication with coordinator(s)

We will use the BCA eLearning site as the main means of communication. Make sure that you have the **correct email registered** in the eLearning platform or you may miss important announcements.

An eLearning Guide, which gives basic information on how to use online eLearning is available from the Student Resources page

<http://www.bca.edu.au/currentstudents.html> on the BCA website.

For every module the Instructor will run an optional online session to discuss the solutions of the proposed exercises and other questions posed by the students. Solutions to the module exercises will be posted on the eLearning site. Assignments will be posted there too.

We will use the Discussions/Forum facility on Canvas. If you have a question or comment about the course material, post it to the relevant Discussion topic, where we can all access it and make a response.

- The Instructor will generally let Discussions flow between the students in each group, except where key points seem to need resolution.
- Any general Discussion items or questions, on the study guide and notes, can be posted to the other Discussion areas.

About online discussions

Discussions form an important part of your learning and your assessment. Discussions are really quite similar to face-to-face tutorials, except that your discussion is in written rather than spoken form, and you can't see those you are talking to (in fact, you may never see them). Some things to think about:

- Students will be invited by the coordinator, in a random fashion, to lead the discussion on specific exercises and share their solutions in the discussion board
- **Everybody's ideas and contributions are valuable.** We can all learn from each other's experience and insights. Don't be shy about contributing your ideas. The more ideas you contribute, the richer the discussion will be. And don't be afraid to be the first to contribute!
- **Your relationship with others in your group:** Make sure you contribute to and read the the **Introductions** post. Maintain good relations with the others by observing netiquette - avoiding overt criticism, flaming etc and being very careful with humour. When you cannot see each other, it's easy to misunderstand something that's perhaps awkwardly worded. Learning is easier if everyone gets on well.
- **Don't be afraid to ask questions.** There may be someone else in the group wondering about just the same thing that puzzled you!
- **Interact** with the others in your group, just as you would face-to-face. Agree, disagree (politely of course, and giving reasons for your opinion). Ask for clarification, add ideas - all of this makes the discussion more interesting and worthwhile.

- **Check in often:** Get into the habit of accessing eLearning regularly and checking the 'Discussions' icon, to see if there have been any new postings. It's much easier to keep up if you check-in regularly.
- **Readings:** Be sure to do the required reading before you start the discussion, so that you can make a meaningful contribution.
- **Length of contributions:** We're not looking for assignment-length postings to discussions! We might indicate how much is needed, but if not, generally just one or two well-written paragraphs will be enough, or even one or two sentences in some cases. This is much kinder to the others in your group, who need to read what you've written or to have a chance to make their own contribution.
- **Getting it right:** You might like to create your posting in a word-processing program and check spelling and grammar before you post. Or type your contribution directly into eLearning and preview the message to have a look at it before you post it.
- **Not happy with your posting?** If you've posted something that you're not happy with, **you won't be able to remove it** – you'll need to ask your tutor to arrange this for you. It's better to make sure your posting is OK before you post it.
- **Adding an attachment:** You can add an attachment created in any program to your posting, but be aware that, if the people who are supposed to read the attachment don't have the same program on their computers, they won't be able to read it.

Questions about administrative aspects or course content can be emailed to the coordinator. Please use "MLB" in the Subject line of your email to assist in keeping track of our email messages. Coordinator/s will be available to answer questions related to the module notes and practical exercises, and to address any other issues that require clarification.

Please note that instructors are not necessarily available every day of the week and you should expect that it may take a day or so to respond to questions (possibly longer over weekends and during breaks).

We strongly recommend that you post content-related questions to the Discussion Board in the unit site.

Module descriptions

Below is an outline of the study modules, followed by a timetable and assessment description table

Each module is scheduled to begin on a Monday and conclude on the Sunday of the following week. **The due date for submission of the required exercises from each module is 11:59pm on the day immediately following the completion of the module, as indicated below.**

Module 1: Introduction to Machine Learning

Book Chapter

- Basics of R language

<ul style="list-style-type: none"> • What is Machine Learning and Artificial Intelligence? 	ISL 2.1 - 2.2
Module 2: Regression and Classification	
<ul style="list-style-type: none"> • Linear regression and KNN regression 	ISL 3.1, 3.2, 3.3, 3.5
<ul style="list-style-type: none"> • Logistic regression and KNN 	ISL 4.1 - 4.3
<ul style="list-style-type: none"> • Discriminant analysis 	ISL 4.4 - 4.5
Module 3: Resampling Methods	
<ul style="list-style-type: none"> • Bootstrap and Cross-validation 	ISL 5.1 - 5.2
Module 4: Regularisation and model selection	
<ul style="list-style-type: none"> • Subset selection 	ISL 6.1
<ul style="list-style-type: none"> • Ridge regression and LASSO 	ISL 6.2
Module 5: Beyond linearity	
<ul style="list-style-type: none"> • Polynomial regression, step functions, basis 	ISL 7.1 - 7.3
<ul style="list-style-type: none"> • Simple Semiparametric Models, Additive Models 	ISL 7.4 - 7.7
Module 6: Beyond additivity	
<ul style="list-style-type: none"> • Classification and regression trees 	ISL 8.1
<ul style="list-style-type: none"> • Bagging, Random Forests, Boosting 	ISL 8.2
<ul style="list-style-type: none"> • Support vector machines 	ISL 9.1 - 9.4
Module 7: Unsupervised learning	
<ul style="list-style-type: none"> • PCA review, K-means and hierarchical clustering 	ISL 10.1 - 10.3
Module 8: Elective topic	
<p>In this module, the student will choose one topic not covered in the previous modules and research it. Examples of topics: Neural networks, ensemble learning, Adaboost.</p>	Research

Unit schedule

Semester 2, 2022 starts on Monday 25 July

Week	Week commencing	Module	Topic	Assessment
1	25 July	module 1	1. Introduction to Machine Learning	
2	1 August	module 2	2. Regression and Classification	
3	8 August			
4	15 August	module 3	3. Resampling methods	Practical exercise 1 released Monday 6pm (AET)
5	22 August	module 4	4. Regularisation and model selection	
6	29 August			Practical exercise 1 due Monday 11:59pm (AET) Assignment 1 released Monday 6pm (AET)
7	05 September	module 5	5. Beyond linearity	
8	12 September			Assignment 1 due Monday 11:59pm (AET)
9	19 September	module 6	6. Beyond additivity	
Mid semester break 26 – 30 September				
10	3 October	module 6	6. Beyond additivity	
11	10 October			Practical exercise 2 released Monday 6pm (AET)
12	17 October	module 7	7. Unsupervised learning	
13	24 October	module 8	8. Elective topic	Practical exercise 2 due Monday 11:59pm (AET) Assignment 2 released Monday 6pm (AET)
14	31 October			
15	7 November			Assignment 2 due Monday 11:59pm (AET)

Assessment

Assessment includes 2 major assignments worth 40% each and 2 practical exercises worth 10% each.

The main assignments are to be completed within approximately two weeks after their release. Assignments will be posted online and an Announcement made in Canvas.

Assessment name	Assessment type	Coverage	Learning objectives	Weight
Exercises 1	Practical Exercises	Modules 1-3		10%
Major Assignment 1	Assignment	Modules 1-4		40%
Exercises 2	Practical Exercises	Modules 1-6		10%
Major Assignment 2	Assignment	Modules 1-8		40%

In general, you are required to submit work typed in Word or similar. We strongly recommend you become familiar with equation typesetting software such as Microsoft's Equation Editor for algebraic work. You may submit neatly handwritten work, however please note that marks will potentially be lost if the solution cannot be understood by the markers due to unclear or illegible writing. Handwritten work should be scanned and collated into a single pdf file and submitted via the eLearning site.

See the [BCA Student Resources site](#) for The BCA Assessment Guide and guidelines on acceptable standards for assessable work and reporting statistical results.

All material submitted for assessment must be entirely your own work. Please see the note on 'Academic Dishonesty and Plagiarism' in the Assessment Guide.

I strongly suggest that you keep a copy of your assignments.

Students are encouraged to discuss relevant topics in the Discussion Board. However, please avoid posting questions relating directly to assessable material. These should be emailed to the Unit Coordinator in the first instance.

Explicit solutions to assessable exercises should not be posted for others to use. Each student's submitted work must be clearly their own, with anything derived from other students' discussion contributions clearly attributed to the source.

Submission and academic honesty policy

All assessment material should be submitted via the relevant Assessment module in Canvas unless otherwise advised. Turnitin plagiarism detection is applied to all submissions. For detailed information, please see the [BCA Assessment Guide](#), which includes links to the Academic Honesty policies at member universities. Please familiarise yourself with the procedures and policies at your home university. You will

need to indicate your compliance with the plagiarism guidelines and policy at your home university.

A special note regarding “contract cheating” sites: Unfortunately, there have been instances in the past of students using such websites to post assignment questions and receive solutions (usually for a fee). We have arrangements with these sites to identify the student posting questions or accessing the solutions, and such students will be referred to and face disciplinary processes at their home university.

Late submission and extension procedure

The standard BCA policy for late penalties for submitted work is a 5% deduction from the earned mark for each day the assessment is late, up to a maximum of 10 days (including weekends and public holidays). Extensions are possible, but these need to be applied for (by email) as early as possible. The Unit Coordinator can approve extensions up to three days; for extensions beyond three days, you must apply to your home university via their standard procedures.

Learning resources

Course notes/slides, homework assignments, and data sets will be posted on the course website. We will follow closely the textbook. The textbook **required** for the unit is:

*Gareth James, Daniella Witten, Trevor Hastie, Robert Tibshirani. “An Introduction to Statistical Learning”, Springer Texts in Statistics. Electronic copy **available for free** at:*

<https://www.statlearning.com/s/ISLRSeventhPrinting.pdf>

(There is a new edition of this book, but the notes refer to the pages of the first edition.)

For supplementary reading, a more in-depth treatment of similar material is provided in:

*Trevor Hastie, Robert Tibshirani, Jerome Friedman. “Elements of Statistical Learning”, Springer Texts in Statistics. Electronic copy **available for free** at:*

<https://web.stanford.edu/~hastie/ElemStatLearn//download.html>

Software requirements and assumed knowledge

We will be using the statistical package R throughout the unit. For help with R, please see [Learning R](#) in the Student Resources site.

Required mathematical background

The unit is mainly computational and basic mathematical knowledge is assumed.

Feedback

Our feedback to you:

The types of feedback you can expect to receive in this unit are:

- Formal individual feedback on submitted exercises assignments
- Feedback from non-assessed online quizzes
- Discussion during the online sessions
- Responses to questions posted on the Discussion board

Your feedback to us:

One of the formal ways students provide feedback on teaching and their learning experience is through the BCA student evaluation survey at the end of each semester. The feedback is anonymous and provides the BCA with evidence of aspects that students are satisfied with and areas for improvement.

Unit changes, including response to recent student evaluation

MLB was last delivered in Semester 2 2021. The feedback of the students was very positive, and no major changes were implemented for the current semester.

Acknowledgments

Thank you to Prof. Jarek Harezlak (Indiana University), Dr. Shuvo Bakar (University of Sydney), and Associate Prof Tim Schlub, for the contribution and comments to the notes
